Installing MapSAR

UnZip the MapSAR package, be sure that the unzipped folder is named MapSAR. Place the MapSAR folder at the root of your C: drive. It's important for MapSAR to be in the correct path in order for the tools to be properly referenced.

You should now have a folder c:\MapSAR\

Note: I find it useful to place a shortcut on my desktop for easy access to MapSAR. In Win7 you can right click the MapSAR folder and select Send To > Desktop (Create Shortcut)

Installing the add-in tools: Open the Tools folder and double click either Install_MapSAR_Tools_10.1.bat or Install_MapSAR_Tools_10.2.bat depending on your version of ArcMap, when prompted click OK.

You'll need to create a version of MapSAR specifically for your UTM zone. Please follow the instructions in Localizing MapSAR.rtf

Verify that you have a menu bar top right containing 8 buttons, this is the MapSAR Make Maps toolbar. If you don't see it, select Customize > Toolbars > MapSAR Make Maps

Lastly select Customize Mode > Extensions and assure that Update ValueLists is checked.
